

# EduLumos

IGNITING MINDS, ILLUMINATING FUTURE

## ABOUT THE COMPANY

### Overview

Founded in 2025, **EduLumos** is a pioneering EdTech startup dedicated to bridging the gap between academic learning and real-world industry requirements. Our mission is to create a holistic ecosystem that empowers students, professionals, and businesses through:

- **Technical Training & Internships** – offering hands-on programs that equip learners with in-demand skills, practical exposure, and career readiness.
- **Consultancy Solutions** – providing expert guidance to organizations for digital transformation, process optimization, and workforce development.

At **EduLumos**, we combine education, technology, and industry insights to ensure that knowledge translates into measurable growth and success.

### Our Vision

*“Igniting Minds, Illuminating Future”*

At **EduLumos**, our mission is to make skill development accessible, affordable, and meaningful. We are dedicated to bridging the gap between academic knowledge and professional experience by providing hands-on, project-based internship programs that equip students with real-world skills.

We offer opportunities in high-demand domains, including:

- ❖ **Frontend Development**
- ❖ **Backend Development**
- ❖ **Machine Learning**
- ❖ **Artificial Intelligence**
- ❖ **Data Science**

Through these internships, we empower students to confidently step into the professional world.

## *What we do?*

***"From classroom to career: equipping learners with skills, experience, and confidence."***

At **EduLumos**, we bridge the gap between academics and industry by offering industry-driven technical training and structured internship opportunities. Our programs combine practical learning, exposure to emerging technologies, and real-world project experience to ensure learners gain both knowledge and hands-on expertise. By focusing on skill development and career readiness, we empower students and professionals to confidently step into the workforce and thrive in today's competitive tech landscape.

## *Why choose us?*

The name **EduLumos** reflects our vision and purpose — ***"Edu" stands for Education, and "Lumos" means Shine, symbolizing our mission to spread the light of education across the world.*** At **EduLumos**, we believe true learning goes beyond textbooks. Our programs are designed in collaboration with industry experts to ensure that students gain practical skills, real-world project experience, and the confidence to excel. With a focus on hands-on training, mentorship, and career readiness, we empower learners to transform knowledge into opportunities and shine in today's competitive world.

## *Instructions for Project Submission*

### *\*Project submission*

- **Every week** a project submission form link will be shared via email later. In the mean time continue working diligently on your assigned tasks and projects.
- It is compulsory to submit your **weekly tasks** through the submission form.
- A **final submission** link will be shared on the **last day** of the internship, where you must submit all completed tasks for **verification** of your internship.

### *\*Projects and tasks requirement*

- **Machine Learning Internship:** To successfully complete the internship, you are required to complete a minimum of **three weekly projects or tasks**. These may be selected from the same level or from different levels, depending on your preference.
- You will be assigned **five projects**, from which you can choose **any three**. Each chosen task must be submitted **weekly** through the weekly submission form.

### *\*Submitting projects on GitHub*

- Create a GitHub repository named “**EDULUMOS INTERSHIP TASKS**” .
- In this repository, you must upload your **weekly tasks** and share the repository link through the **weekly submission form**.

### *\*Develop and submit a video demonstration of your work*

- Create a video that highlights your work. The video should clearly present your efforts and contributions to the assigned tasks or projects.
- Share this video on **LinkedIn** to showcase your skills and add credibility to your internship experience.
- Tag **@EduLumos** in your LinkedIn post.
- Use the hashtag **#EduLumosInternship** for consistency and visibility. You may also add other hashtags such as **#Internship** and **#DataScience** to increase reach.

### *\*Make use of online learning materials*

- You are encouraged to use any tools like Google search and video tutorials to support your learning.

### *\*Recognition for exceptional performance*

- Every student or professional who successfully completes the internship tasks will be awarded an **Internship Completion Certificate**, certified by **MSME**.

### *\*Top-performing interns will be rewarded with:*

- A **Letter of Recommendation (LOR)**.
- An opportunity to earn a **stipend** based on exceptional performance.
- Public acknowledgment on **EduLumos official page** for noteworthy contributions.

## MACHINE LEARNING

“Machines learn, but only a learner makes them smart ”

### Projects information:

# Tasks:

Tasks	Description	Reference (optional)
<p><b>Task 01:</b></p> <p>Smart Study Score Predictor – Learn the Power of Regression</p>	<p>In this project, students will explore how study habits, test preparation, and lifestyle factors influence exam performance. You'll learn to handle real-world education data, clean it, <b>visualize insights</b>, and <b>use regression algorithms</b> to predict scores. This project gives you hands-on exposure to the fundamentals of <b>data-driven prediction</b> — the starting point of <b>every ML</b> journey</p> <p><b>Learning skills:</b> Students will learn how to preprocess data, handle <b>missing values</b>, and <b>visualize relationships</b>. They'll also understand how regression models make <b>predictions</b> and how to measure their performance using error metrics.</p>	<p><b>Dummy Data set:</b> <a href="#">Performance Dataset</a></p> <p>(Note: You can also use any other data set of your choice)</p> <p><b>Video Reference:</b> <a href="#">Student Performance Project using ML</a></p> <p>(This video is for reference only. You should learn the concepts and build your own project to correct this and complete it.)</p>
<p><b>Task 02:</b></p> <p>AI Health Analyst – Predicting Heart Diseases with Machine Learning</p>	<p>This project shows how <b>Machine Learning</b> helps in healthcare. You'll use patient data to build a model that predicts the risk of <b>heart disease</b>, <b>gaining practical experience</b> in <b>classification algorithms</b> used in <b>medical analytics</b>.</p> <p><b>Learning skills:</b> Students will understand how to apply <b>Logistic Regression</b> and <b>Decision Trees</b>, prepare data using <b>normalization</b>, and evaluate models using accuracy and <b>confusion matrices</b> to make reliable predictions.</p>	<p><b>Dummy Data set:</b> <a href="#">Heart Disease Dataset</a></p> <p>(Note: You can also use any other data set of your choice)</p> <p><b>Video Reference:</b></p> <p><a href="#">Heart Disease ML</a> <a href="#">Heart Disease Project</a></p> <p>(This video is for reference only. You should learn the concepts and build your own project to correct this and complete it.)</p>

<p><b>Task 03:</b></p> <p>Customer Universe – Grouping Shoppers with K-Means Magic</p>	<p>In this project learn how businesses group customers based on <b>income</b> and spending habits. In this project, you’ll apply <b>K-Means clustering</b> to <b>segment customers</b> and uncover shopping trends for <b>smarter marketing</b>.</p> <p><b>Learning skills:</b> Students will grasp how <b>K-Means clustering</b> works, how to choose the right number of <b>clusters</b>, and how to visualize and interpret customer groups to find <b>hidden patterns</b> in data.</p>	<p><b>Dummy Data set:</b> <a href="#">Mall Customer Segmentation Dataset</a></p> <p>(<u>Note: You can also use any other data set of your choice</u>)</p> <p><b>Video Reference:</b></p> <p><a href="#">Clustering Project</a></p> <p>(This video is for reference only. You should learn the concepts and build your own project to correct this and complete it.)</p>
<p><b>Task 04:</b></p> <p>Truth or Trash – Detecting Fake News with NLP</p>	<p>In this project, you’ll use <b>Natural Language Processing</b> to train a model that can identify fake news articles. It’s a great way to explore <b>text data</b> and understand how <b>AI</b> can detect <b>misinformation</b>.</p> <p><b>Learning skills:</b> Students will learn <b>basic text preprocessing</b>, use <b>TF-IDF</b> to convert text into <b>numerical data</b>, and <b>apply Logistic Regression</b> to classify news articles as <b>real or fake</b>.</p>	<p><b>Dummy Dataset:</b> <a href="#">Fake News Dataset</a></p> <p>(Note: You can also use any other data set of your choice)</p> <p><b>Video Reference:</b></p> <p><a href="#">Fake news detection using ML</a></p> <p>(This video is for reference only. You should learn the concepts and build your own project to correct this and complete it.)</p>
<p><b>Task 05:</b></p> <p>Smart Home Valuator – Predicting House Prices with ML Intelligence</p>	<p>This capstone project combines all your skills <b>to predict house prices</b> using real estate data. You’ll build an advanced regression model and learn how ML supports business decisions in property valuation.</p> <p><b>Learning skills:</b> Students will explore feature engineering, work with advanced models like <b>Random Forest</b> and <b>XGBoost</b>, and learn how to evaluate and fine-tune models for better <b>prediction</b> accuracy.</p>	<p><b>Dummy Dataset:</b> <a href="#">House Dataset</a></p> <p>(Note: You can also use any other data set of your choice)</p> <p><b>Video Reference:</b></p> <p><a href="#">Advanced House Data Prediction</a></p> <p>(This video is for reference only. You should learn the concepts and build your own project to correct this and complete it.)</p>
